

## NEW ADR PROPOSAL

### *IRU analysis*

**This document contains a comparison of the ADR 2019 vs ADR 2017**

## I. BACKGROUND

The dangerous goods transport regulations road (ADR) will come into force on 01.01.2019. As always, there will be a general 6 month transition period, until 30.06.2019 the current regulations of the ADR 2017 may continue to be used unrestrictedly.

The new regulations are based on the 20th edition of the UN Recommendations on the Transport of Dangerous Goods. These will be implemented in parallel for the other modes of transport, for rail and inland waterway transport identical to ADR, for air traffic without transitional period from 1.1.2019 and for maritime transport with Amendment 39-18 to the IMDG Code binding only on 1.1.2020. However, the new IMDG code may already be used from 1.1.2019 on to enable a simultaneous implementation for the companies:

## II. ANALYSIS

Numerous changes have been made to the ADR 2019, the essentials are shown in the following overview and a more detailed analysis is reported in the next pages.

### Major changes include:

#### **Vol. 1:**

- A total of 14 new UN numbers will be introduced, e.g. for devices and machines which contain dangerous goods as an elementary component in their internal structure;
- The UN 3363: the exemption in 1.1.3.1 b) is deleted;
- New exemption related to quantities carried out per transport unit are introduced (1.1.3.6.3)
- The classification of mixtures of Class 8 - corrosive substances will be re-regulated (pag. 234)

#### **Vol. 2:**

- New packaging instructions and new special regulations are introduced for lithium batteries, safety-critical batteries can now be transported without official approval if a certified packaging system is used (chapter 4.1);
- The requirement that the inner boundary line of the danger label samples must be at least 2 mm wide is abolished (rif. 5.2.2.2.1.1.3);
- The regulations for the transport of temperature-controlled substances are being restructured in a section 7.1.7

### III. NEXT STEPS

The detailed changes can be found in the following table, which compares the previous regulation vs the new one.

A proposal indication on the priorities has been also inserted.

## VOL.1

| Site / Content  | 2017  | 2019   | Priorities |
|---|---|--|------------|
| <b>Chapter 1.1</b>  |   |  |            |
| 1.1.3.1 (b)<br>Exemption related to the nature of the transport operation | Exemption for devices or machines which contain dangerous goods in their internal structure and which are not explicitly listed in the ADR. In conjunction with the relevant UN number UN 3363, such devices or machines are exempt from ADR. | Deleted<br><br>1.1.3.1 (b) is deleted and 12 new UN numbers are introduced (UN 3537 to UN 3548, see also notes to Chapter 3.2 and Section 2.1.5) for such items, depending on the dangerous goods contained. If not more than the quantities permitted in limited quantities, it remains with the assignment to UN 3363 and the exemption from the ADR according to the new special provision 301 and 672. | <b>X</b>   |
| 1.1.3.6.3   | Table contains information on which dangerous goods are classified in which category of carriage  | For category 4, the new UN numbers are added – class 2 , 3 , 4.3 , 5.1 , 5.2 , 6.1 and 7   | <b>X</b>   |
| 1.1.3.6.3   |   | The new text considers the total mass in kg of the items without their packaging   |            |
| 1.1.4.2.1   |   | In the list are now also bulk-well container listed, which had been forgotten until now  |            |
| <b>Chapter 1.2 Definitions</b>  |   |  |            |
| 1.2.1<br>Definitions  | Reference to 19th edition of the UN Model Regulations   | Reference to the 20th edition of the UN Model Regulations  |            |
| Content: it is the same, but different                                    | A tank for the carriage of liquid substances with a pressure of at least 4 bar or   | <b>New</b> definition of hermetically closed tank:   |            |

| Site / Content | 2017   | 2019  | Priorities |
|----------------|--|---|------------|
| structure      | for the transport of solid (powdered or granular) materials, regardless of their calculated pressure, the openings of which are hermetically sealed, and - not equipped with safety valves, rupture discs, similar safety devices or vacuum valves, or - not equipped with safety valves, rupture discs or similar safety devices, but with vacuum valves complying with 6.8.2.2.3, or - with safety valves which are preceded by a rupture disc in accordance with 6.8.2.2.10 but not equipped with vacuum valves, or - with safety valves fitted with a rupture disc in accordance with 6.8.2.2.10 and equipped with vacuum valves conforming to 6.8.2.2.3 | <p>A tank that</p> <ul style="list-style-type: none"> <li>- not equipped with safety valves, rupture discs, other similar safety devices or vacuum valves, or</li> <li>- with safety valves which have been fitted with a rupture disc in accordance with 6.8.2.2.10, but which are not equipped with vacuum valves.</li> </ul> <p>A tank for the carriage of liquid substances with a design pressure of at least 4 bar or for the transport of solid (powdered or granular) materials, whatever its design pressure, shall also be considered to be sealed when it is closed</p> <ul style="list-style-type: none"> <li>- with safety valves fitted with a rupture disc in accordance with 6.8.2.2.10 and equipped with vacuum valves conforming to 6.8.2.2.3, or</li> <li>- not equipped with safety valves, rupture discs or other similar safety devices, but with vacuum valves complying with 6.8.2.2.3</li> </ul> |            |
|                |  | <b>New definition</b> of "Diameter (of tank body of tanks)": The inner diameter of the shell  |            |
|                |  | <b>New definition</b> of "protective lining (of tanks): lining or coating which protects the material of the metal tank against the substances to be carried  |            |
|                |  | <p><b>New definition</b> of "over-moulded cylinder ":</p> <p>A cylinder intended for the carriage of LPG with a water-capacity not exceeding 13 liters made of a coated welded steel inner cylinder with a an over-moulded protective case made from cellular plastic, which is non-</p>  |            |
